Kuu Kuu Harajuku

Template:Delete Kuu Kuu Harajuku (originally titled KooKoo Harajuku) is a Japanese-influenced animated children's television series created by singer-songwriter Gwen Stefani.

Why It Sucks

1. The character designs are creepy, ugly, disturbing, and oddball since they try so hard to look so cute (note, EVERYTHING in the world always has to have something cute on it. Even PhantomStrider thinks that the character designs are copy-pasted) but yet look like rip-offs of the Bratz.
2. The songs that the show offer are literally generic pop songs, considering that this show was made by Gwen Stefani, a **pop** singer, that sound way too cheesy and cringy. The theme song is probably the worst, since Gwen sings the song, but sounds bored out of her brains while singing.
3. Flat stories in every episode. You got the band always getting into trouble just because they did something wrong, but then realize their mistakes, fix the issue, and it's over.
4. This show was influence by Japan, but yet there is **nothing** that is like Japan. Instead, it's all influenced by...wait for it...kawaii. It makes sense, at least. The characters are also supposed to look Asian, but as said before, they don't look anything like it.
5. The naming makes no sense! The main characters are named after cute things (i.e. Love, Angel, Music and Baby). The show's title doesn't make any sense, either.
6. Terrible Flash animation that the characters move so robotic and stiff, easily compared to the later episodes of the 10th season of *The Fairly Oddparents*.
7. The characters themselves are rude to each other. A super fan once literally sucked the HJ5 into a video game just so she could see them.
8. The show seems like a rip-off of Hi Hi Puffy AmiYumi because both shows are related to music and are based on people in real life (In this case, the Harajuku Lovers band).
